

Child Health Profile

March 2017

Croydon

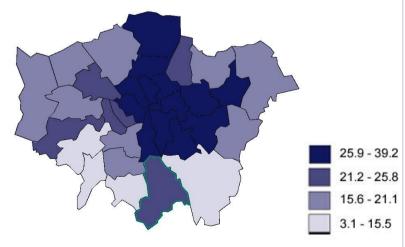

This profile provides a snapshot of child health in this area. It is designed to help local government and health services improve the health and wellbeing of children and tackle health inequalities.

The child population in this area

	Local	Region	England
Live births (2015)	5,833	129,615	664,399
Children aged 0 to 4 years (2015)	28,600	633,300	3,434,700
	7.5%	7.3%	6.3%
Children aged 0 to 19 year	s 101,900	2,140,000	13,005,700
(2015)	26.9%	24.7%	23.7%
Children aged 0 to 19 year	s 115,100	2,438,300	14,002,600

Children living in poverty

Map of London, with Croydon outlined, showing the relative levels of children living in poverty.

Key findings

Children and young people under the age of 20 years make up 26.9% of the population of Croydon. 70.3% of school children are from a minority ethnic group.

The health and wellbeing of children in Croydon is mixed compared with the England average. Infant and child mortality rates are similar to the England average.

The level of child poverty is worse than the England average with 22.7% of children aged under 16 years living in poverty. The rate of family homelessness is worse than the England average.

Children in Croydon have worse than average levels of obesity: 10.2% of children aged 4-5 years and 24.7% of children aged 10-11 years are classified as obese.

The teenage pregnancy rate is higher than the England average. In 2015/16, 29 teenage girls gave birth which represents 0.5% of women giving birth. This is lower than the England average.

In 2015/16, children were admitted for mental health conditions at a higher rate to that in England as a whole. The rate of inpatient admissions during the same period because of self-harm was lower than the England average.

Croydon Child Health Profile

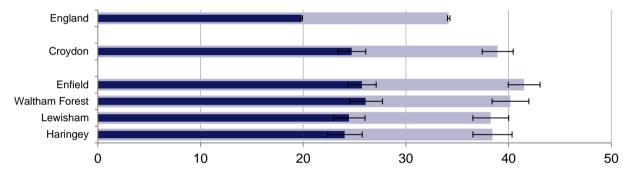

Childhood obesity

These charts show the percentage of children who have excess weight (obese or overweight) in Reception (aged 4-5 years) and Year 6 (aged 10-11 years). They compare Croydon with its statistical neighbours, and the England and regional averages. Compared with the England average, this area has a similar percentage of children in Reception (21.5%) and a worse percentage in Year 6 (38.9%) who have excess weight.

Children aged 10-11 years who have excess weight, 2015/16 (percentage)

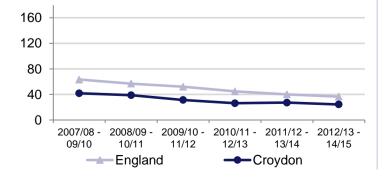

Note: This analysis uses the 85th and 95th centiles of the British 1990 growth reference (UK90) for BMI to classify children as overweight and obese. I indicates 95% confidence interval.

Young people and alcohol

Nationally, the rate of young people aged under 18 being admitted to hospital because they have a condition wholly related to alcohol is decreasing, and this is also the case in Croydon. The admission rate in the latest period is lower than the England average.

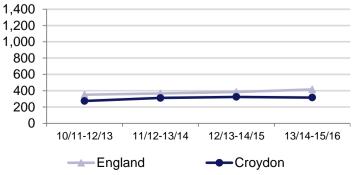

Young people aged under 18 admitted to hospital with alcohol specific conditions (rate per 100,000 population aged 0-17 years)

Young people's mental health

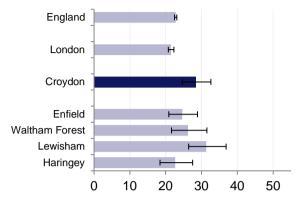

Nationally, the rate of young people aged under 18 being admitted to hospital as a result of self-harm is increasing. There is no significant trend in Croydon. The admission rate in the latest period is lower than the England average. Information about admissions in 2015/16 is on page 4. Nationally, levels of self-harm are higher among young women than young men.

Young people aged 10 to 24 years admitted to hospital as a result of self-harm (rate per 100,000 population aged 10-24 years)

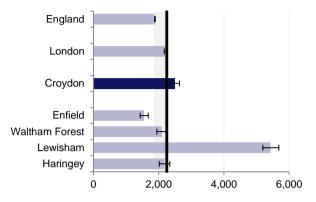

These charts compare Croydon with its statistical neighbours, and the England and regional averages.

Teenage conceptions in girls aged under 18 years, 2014 (rate per 1,000 female population aged 15-17 years)

In 2014, approximately 28 girls aged under 18 conceived for every 1,000 women aged 15-17 years in this area. This is higher than the regional average (approximately 22 per 1,000). The area has a higher teenage conception rate compared with the England average (approximately 23 per 1,000).

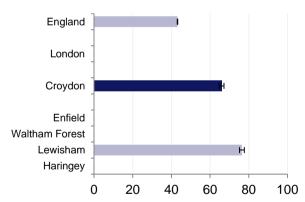

Chlamydia detection, 2015 (rate per 100,000 young people aged 15-24 years)

Chlamydia screening is recommended for all sexually active 15-24 year olds. Increasing detection rates indicates better targeting of screening activity; it is not a measure of prevalence. Areas should work towards a detection rate of at least 2,300 per 100,000 population. In 2015, the detection rate in this area was 2,489 which is better than the minimum recommended rate.

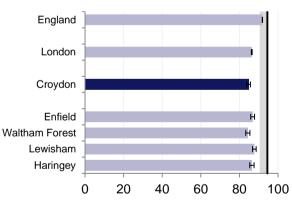

The shaded area from 1,900 shows the range of values approaching the minimum recommended rate of 2,300 (the black line).

Breastfeeding at 6 to 8 weeks, 2015/16 (percentage of infants due 6 to 8 week checks)

In this area 96.8% of babies received a six to eight week review by a health visitor before they turned eight weeks. At this point, 65.9% of babies were still breastfed which is higher than the national average.

Measles, mumps and rubella (MMR) vaccination coverage by age 2 years, 2015/16 (percentage of eligible children)

Less than 95% (the minimum recommended coverage level) of children have received their first dose of immunisation by the age of two in this area (84.8%). By the age of five, only 75.3% of children have received their second dose of MMR immunisation. In London, there were 47 laboratory confirmed cases of measles in young people aged 19 and under in 2015.

The shaded area from 90% shows the range of values approaching the minimum recommended coverage of 95% (the black line).

Note: Where data is not available or figures have been suppressed, no bar will appear in the chart for that area.

Croydon Child Health Profile
